

Modular H₂ refuelling for applications
where conventional infrastructure does not fit

Smart Hydrogen Refuelling System

The DILLO Smart Hydrogen Refuelling System provides a modular approach to refuelling hydrogen-powered vehicles and equipment. It can be configured to match the available hydrogen supply, required capacity and level of automation – from simple fleet applications to automated fixed-base operations.

- Fast and reliable hydrogen refuelling
- Automated pressure monitoring
- Integrated safety and control functions
- Modular design for different storage and dispensing concepts
- Scalable configuration for varying refuelling capacities
- Compliance with applicable hydrogen refuelling standards
- Usage of bottle bundles or trailers
- Optional: pressure regulator, metering system, remote monitoring, access control
