

- ✓ Founded in 2017
- ✓ Operating Worldwide
- ✓ ISO 9001 certified

What we do

➤ Plant Engineering & process development

Development, design and construction of custom synthesis plants at laboratory and pilot scale – including process planning, scale-up and commissioning.

➤ Medical Technology & Life Sciences

Functional materials for medical diagnostics, targeted drug delivery and therapeutic applications.

➤ Renewable Energy

Functional materials for batteries, catalysis, electronics and environmental technology – optimized for performance and cycle stability.

Why HSW?

At HSW, mechanical engineering meets materials science. We develop custom plants, master the processes and produce functional materials – all under one roof.

✓ We produce ourselves

Our own functional materials, our own synthesis plants – genuine process know-how from real practice.

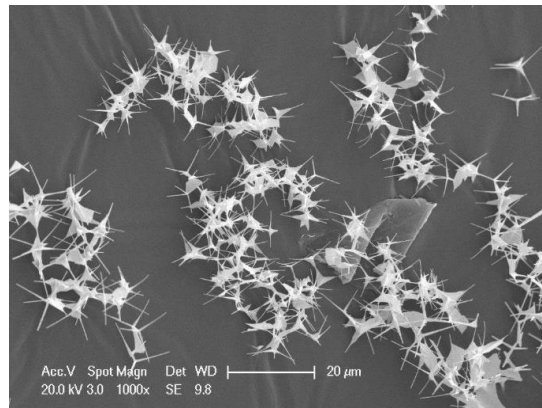

✓ Two worlds, one solution

Engineering precision meets scientific excellence.

✓ From plant to product

One team covers plant engineering and material synthesis – fast, precise and effective.

"Built by engineers, driven by science."

Functional materials from gram to ton scale.
