

Steam Accumulators & Boiler Drums

Steam accumulators and boiler drums are used in power stations, steel production, waste incineration and in industries such as the paper or pulp industry.

For every application, we can design, manufacture and certify the right solution from carbon steels, stainless steels, clad steels and duplex steels.

Our Variants

We manufacture with:

-  customer-specific dimensions
-  customer-specific pressures
-  customer-specific additional options
-  various installation options:
 - classic horizontal position
 - standing upright

Steam Accumulators & Boiler Drums	
Volume	up to 130.000L
Weight	up to 150t
Wall thickness	up to 235mm
Diameter	up to 5.000mm
Connections	Standard flanges and pipes

Your Benefits

Configurability

Vessels can be customised in terms of diameter and other details

Variable connections

Variation of several connections with different sizes possible on one vessel

Certified

We are certified according to national and international standards

Better roundness tolerances

We roll with ovalities of max. 0.5%, which enables a longer service life

Installation of add-ons

According to customers wishes

- Metal & Pipe installations
- Scrubbers
- Demisters
- Preheaters
- Perforated plates
- Collectors
- Saddles & base constructions can be integrated
